

Presentation Folders

About the knife templates

- Indesign formecut templates contain a '**knife**'.
- The '**knife**' file has been set-up on the locked '**template**' layer of the Indesign file.
- Place your PDF file on the '**file**' layer and create a new PDF file. The new file will include the '**knife**'.

Template Colour

- We have set all our '**knife**' lines in Pantone colour '**072**' and the swatch has been renamed '**knife**'.
- **PLEASE NOTE:** It is important that this remains unchanged.

About the 'knife' file

- The '**knife**' file on the '**template**' layer is an indicator of where the job will fold. It will not print on your job.
- Please do not alter this file as it represents a pre-determined folded section.
- Only apply forme to the front artwork. If your artwork is double sided the back artwork (second page of the PDF) does not require the knife line

Bleed

- Ensure that you have **3mm** (minimum) of bleed where any background colour/images extend past the trim edge.
